

Corporate Reporting in the Cloud

Dr. Peter Black, Managing Director at EnergySys, describes the benefits of the Corporate Reporting module in our Production Allocation Cloud...

See the big picture

The Production Allocation Cloud™ at energysys.com brings revolutionary capabilities to the reporting of production from oil and gas assets. It is already the most configurable, flexible and powerful solution available, and the fastest to deploy, but now customers have the option to deliver Corporate Reporting that spans all of the assets in an enterprise.

Typically an asset will have its own production reporting system with its own allocation logic, but for corporate purposes you need to be able to see the big picture. You need to present all the assets in a single report, with rolled-up figures, for use by the corporate executive teams, or anyone else, who needs to understand the performance of the business. That's what we've delivered with the Corporate Reporting module of the Production Allocation Cloud™.

energySYS Daily Allocation Dashboard

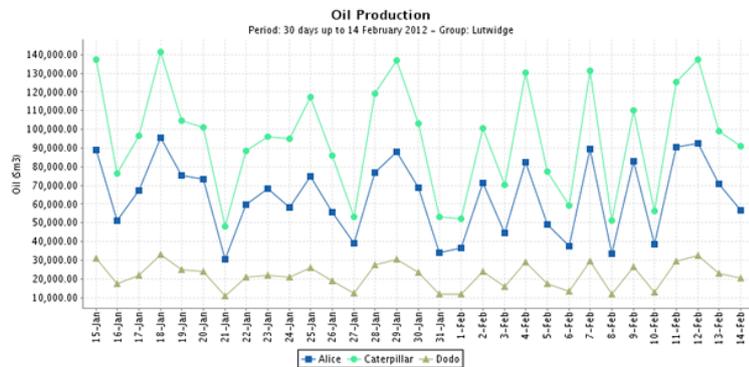

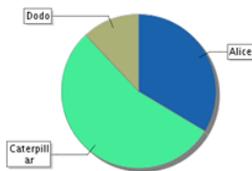

Production Date: 14 February 2012
Data status: Final

Hierarchy Navigator: All Allocation Allocation Group: Lutwidge

	Oil (Sm3)	Gas (Sm3)	Inj Gas (Sm3)	Lift Gas (Sm3)	Condensate (Sm3)	Water (Sm3)	Inj Water (Sm3)
Alice	56,433.35	123.01	70.66	61.36	0.00	1,580.32	585.33
Caterpillar	91,080.85	215.63	113.17	93.43	0.00	2,423.15	1,015.17
Dodo	20,115.74	85.25	25.17	17.38	0.00	449.74	404.10
Total	167,629.94	423.88	209.01	172.16	0.00	4,453.21	2,004.61

Date: 14 February 2012 - Group: Lutwidge

Minimise manual labour

Most companies have equity interests in multiple assets, some operated and some non-operated, and the Production Allocation Cloud™ can be used to support each of these distinct operations. Automated import of emails and spreadsheets means that manual effort is minimised, and error rates substantially reduced. However, it doesn't stop there, and adding Corporate Reporting provides a way to view data across assets, no matter what system is in use locally. If customers are not using the Production Allocation Cloud™ on an asset, all that's required is some configuration to create a process to import the data. Because it's the cloud, it doesn't matter where the assets are located in the world.

With Corporate Reporting, there's no need for manual data gathering and input, and no need to manage and check significant amounts of raw data. There's no need to have someone invest significant effort in cutting, copying and pasting from various spreadsheets, delivered by different parties in different formats, and at varying times, collating them, and emailing them. That repetitive and tedious work probably demands the attention of a very well qualified and experienced individual, and it has to be checked carefully at every stage. Now, all of the individual asset systems can automatically submit data to Corporate Reporting, and the recipients just go in to look at the results. What is more, analysis of historical performance can be done in ways that are just not possible with other systems or, worse, a large collection of spreadsheets.

Rapid incremental delivery

With Corporate Reporting, there's no need for a massive "big bang" project. The system can be delivered incrementally, and because it's based in the cloud it means that assets can be added at any time and from anywhere. All customers have both a test and a live environment to work with, so once all the testing is done it's a straightforward process to migrate a test environment into live production.

Bringing any new asset into the system requires only a few man-days to carry out import configuration, and any time to create custom reports. However, once the required format is set and tested, the reports run automatically.

Low cost, high value

If you're a subscriber to the Production Allocation Cloud™, there's no additional subscription necessary to use the Corporate Reporting module. The same single, low-cost subscription covers all aspects of your use of the system.

For users new to the Production Allocation Cloud™, all that you need to do is to buy a single twenty-five subscription pack to the Cloud, at an average cost per subscriber of just £100 per named user per month. Once you have a subscription, there's nothing

extra to pay: you can use any of the standard applications, build your own applications, create ad hoc reports, and access Corporate Reporting. And because it's in the cloud, we take care of everything, like backups, storage, software updates, and servers. All you need is a web browser.

It's a beautiful, elegant solution, powerful but intuitive, and requiring very little training to use. It can be accessed securely from anywhere at any time, and everything you do on the system is recorded in our audit history.

And that's only the beginning...

The Production Allocation Cloud™, including Corporate Reporting, is built on the energysys.com platform, and that means it is easy to modify for your own purposes. Even better, you can create your own applications, simply by configuration; you do not need programming or special tools.

There truly is no other system like it.
